## Abstracts

A cook-in-bag is utilized for roasting meat, or other food products in an oven. Culinary parchment or durable plastics generally form the radical materials used for manufacturing cook-in-bags. Trapping moisture in the food during cooking, and retaining the same, is a fundamental feature of a cook-in-bag, which further serves the purpose of blasting. Cook-in-bag variants are generally produced by using polyester, or heat-resistant nylon, to prevent their melting at cooking temperatures and food spoilage.
