Abstracts

Coolant Testing is a professional testing service/process for coolants (also known as antifreeze or coolant) used in industrial cooling systems, automotive engine cooling systems, and mechanical equipment heat dissipation circuits. Based on physicochemical analysis and performance simulation testing, it provides a comprehensive assessment of coolant performance by quantitatively testing key indicators (such as component concentration, physicochemical properties, and corrosion protection capabilities). This evaluation determines whether the coolant meets industry standards (such as ASTM, ISO, and GB/T) and equipment operating requirements, assesses the degree of aging, contamination, or failure, and provides early warnings of potential risks such as corrosion, scaling, and blockage in the cooling system. This data supports coolant replacement, maintenance, and formulation optimization, ensuring efficient equipment cooling, extending equipment lifespan, and preventing downtime due to coolant failure. Traditional single-parameter testing equipment is gradually being phased out, while integrated equipment capable of detecting multiple parameters such as conductivity, pH value, and corrosivity is becoming mainstream. This type of equipment has become standard equipment in new energy vehicles and data center liquid cooling systems. Simultaneously, the intelligence level of these devices is continuously improving. Mainstream equipment is generally equipped with modules such as Bluetooth and 4G, enabling remote data uploads. In 2023, the sales share of devices with this function reached 72.4%. In the next two years, the shipment share of intelligent testing instruments with 5G communication modules and edge computing capabilities is expected to increase to over 40%. In the global market distribution, North America ranks first with a 35% market share, followed closely by Europe at 30%. Both regions dominate due to their mature automotive and aerospace industries and stringent industry standards. The Asia-Pacific region, with a 25% share, is the fastest-growing region. The expansion of manufacturing in countries

such as China and India, and the explosive growth of the new energy vehicle industry, are driving rapid increases in market demand in this region.

The global Coolant Testing market size was estimated at USD 1253.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.80% during the forecast period.
