Abstracts

Cooling Drum Flakers are commonly used in the chemical, pharmaceutical, and food industries to cool and solidify molten materials into flakes. The working principle involves evenly spreading the molten material onto the surface of a cooling drum, where it solidifies as the drum rotates. The solidified material is then scraped off by a blade. This equipment enhances production efficiency and ensures consistent product shape and quality, making it ideal for handling heat-sensitive and easily decomposable substances.

The global Cooling Drum Flakers market size was estimated at USD 227.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.30% during the forecast period.
