Abstracts

Cooling fan control modules are commonly used for cooling machines or electronics that generate heat in operation. Their geometry is designed to take heat away from the hot spots and for the ease of assembly and disassembly of the host products. Because of their close proximity to the core operation part of the equipment, cooling modules normally require a high level of cleanness and should be free of oil and particles. Cooling fan control modules are often found in automotive, power electronics, computers, and medical/healthcare equipment. Their irregular geometric shape requires progressive stamping and insert molding processes.

The global Cooling Fan Control Module market size was estimated at USD 546.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.30% during the forecast period.
