Abstracts

The cooling and dust removal atomization system is an environmentally friendly system that uses high-pressure spray or ultrasonic atomization technology to atomize water into micron-sized particles, achieves cooling through evaporation and heat absorption, and condenses dust through water mist to make it settle, thereby achieving the effect of dust removal. The system can effectively reduce the working environment temperature, reduce suspended dust in the air, improve air quality, and suppress static electricity and reduce the risk of dust explosion. It is widely used in metallurgy, mining, construction, garbage disposal, chemical industry, textile and other industries to improve the working environment and meet environmental protection and occupational health and safety requirements.

The global Cooling and Dust Removal Atomization System market size was estimated at USD 601.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.10% during the forecast period.
