Abstracts

A cooling tower is a specialized heat exchanger in which air and water are brought into direct contact with each other in order to reduce the water's temperature. As this occurs, a small volume of water is evaporated, reducing the temperature of the water being circulated through the tower. Global key manufacturers of cooling towers include Baltimore Aircoil Company (BAC), SPX Cooling Technologies, EVAPCO, and Seagull cooling. The top three producers together hold about 25% of the market share, with the largest producer being BAC at 12%. The global origins are mainly located in the United States, Europe, South America, China, Japan, India, and Korea. In terms of product category, it is divided into open-circuit cooling towers and closed-circuit cooling towers, with the former holding a major market share of 65%. In terms of applications, power generation is the number one application area with a 25% market share; in addition, HVAC, oil and gas are also important applications.

The global Cooling Towers market size was estimated at USD 3593.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.20% during the forecast period.
