Abstracts

Cooling vests for surgeons are specialized wearable garments designed to regulate body temperature and manage thermal stress during long, physically demanding surgical procedures, particularly in operating rooms that must be kept warm for patient safety or in minimally invasive surgeries where heavy lead aprons are worn. These vests typically incorporate phase change materials (PCMs), air or liquid cooling systems, or evaporative technologies to absorb and dissipate body heat, thereby reducing fatigue, improving concentration, and minimizing the risk of heat-related errors. The primary function is to enhance surgeon comfort and performance by maintaining a stable core body temperature in environments where traditional climate control is insufficient or impractical, directly addressing occupational health challenges in high-stakes medical settings.

The global Cooling Vests For Surgeons market size was estimated at USD 380.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.80% during the forecast period.
