Abstracts

The market for COPD and asthma devices encompasses a range of medical equipment designed to assist in the management, treatment, and monitoring of chronic obstructive pulmonary disease (COPD) and asthma, which are both chronic respiratory conditions characterized by airflow obstruction and breathing difficulties. Key product categories include inhalers (such as metered-dose inhalers, dry powder inhalers, and soft mist inhalers), nebulizers (both portable and stationary), positive expiratory pressure (PEP) devices, spirometers for lung function testing, and peak flow meters for monitoring airway constriction. These devices are critical for delivering bronchodilators, corticosteroids, and other medications directly to the lungs, as well as for assessing respiratory health and guiding treatment adjustments. The market is driven by the rising global prevalence of respiratory diseases, increasing air pollution levels, growing aging populations, technological advancements in device design (such as smart inhalers with digital connectivity), and greater emphasis on patient self-management and home-based care. Regulatory approvals, reimbursement policies, and the shift toward personalized medicine also significantly influence product development and adoption.

The global Copd And Asthma Devices market size was estimated at USD 26000.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.80% during the forecast period.
