Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Copper-based Metal Mesh Conductive Films competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Copper-based Metal Mesh Conductive Films production reached approximately 14,951 K square meters, with an average global market price of around US\$ 25 per square meters. Copper-based Metal Mesh Conductive Films is a touch-sensitive layer made from a fine grid of copper wires (mesh) embedded or patterned on a transparent substrate, such as PET film or glass. This mesh acts as the conductive layer in projected capacitive (PCAP) touch systems, detecting changes in capacitance when a finger or stylus approaches or touches the screen. The upstream raw material supply chain for copper-based metal mesh conductive films directly impacts product performance, cost, and market competitiveness. Upstream suppliers primarily include manufacturers of three product categories: copper-based pastes, base film materials, and solvents and additives. With advantages such as high conductivity, high light transmittance, and flexible bendability, copper-based metal mesh conductive films are rapidly replacing traditional ITO (indium tin oxide) as a core choice for the next generation of transparent conductive materials. Its downstream users include manufacturers of products in rapidly growing sectors such as consumer electronics, new energy, smart cars, and medical displays."

The global Copper-based Metal Mesh Conductive Films market size was estimated at USD 374.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 9.40% during the forecast period.
