Report Overview

CCA or Copper Clad Aluminum Cable is composed of copper clad aluminum wires which are made from an aluminum core clad with a thin layer of copper. The copper makes up 10% , 15%, and 40% of the wires volume while the rest composes of aluminum alloy wire. Copper clad aluminum is used practically in high-quality coils where weight is very important. Copper clad aluminum wire incurs a low manufacturing cost and thus yields a higher profit during sales for manufacturers compared to counterparts who sell the actual copper equivalents.
