## Abstracts

Copper clad steel products represent a composite material that combines the mechanical strength and cost-effectiveness of a steel core with the superior electrical conductivity, corrosion resistance, and aesthetic appeal of an outer copper layer. These products are manufactured through various metallurgical processes, such as cladding, electroplating, or continuous casting, to ensure a metallurgical bond between the two metals, resulting in a material that offers enhanced performance characteristics for specific applications. Widely used across industries including telecommunications, power transmission, automotive, and construction, copper clad steel products provide an optimal balance between durability, functionality, and economic efficiency, making them particularly valuable in applications where pure copper may be cost-prohibitive or mechanically insufficient, such as in grounding systems, coaxial cables, and electromagnetic shielding components.

The global Copper Clad Steel Products market size was estimated at USD 1050.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
