## Abstracts

A copper cold rolling mill is a specialized industrial machine used to reduce the thickness of copper or copper alloy strips or sheets at room temperature, enhancing their mechanical properties, surface finish, and dimensional accuracy through a series of precision-controlled rolling passes. This equipment is critical in producing high-quality copper products, such as electrical components, heat exchangers, and architectural materials, by applying compressive forces between work rolls to achieve desired gauge, temper, and flatness without the need for heating the material, thereby avoiding oxidation and preserving the metal's inherent conductivity and ductility.
