Abstracts

Copper filaments for FDM printing are specialized 3D printing materials that are infused with copper particles, combining the versatility of traditional thermoplastics with the appearance and feel of copper metal. These filaments are used in Fused Deposition Modeling (FDM) 3D printers, where the filament is heated and extruded to create objects layer by layer. The resulting prints have a metallic look and a heavier weight compared to standard filaments like PLA or ABS. Copper filaments are popular for creating prototypes, decorative items, and small batch production parts that require a copper-like finish, and they can be polished or treated to enhance their metallic sheen for artistic or functional applications.

The global Copper Filaments for FDM Printing market size was estimated at USD 146.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.70% during the forecast period.
