Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Copper Foil for Solid-state Batteries competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. The requirements for copper foil of traditional liquid lithium batteries and solid-state lithium batteries are different: the copper foil of traditional lithium batteries needs to have high mechanical strength support, and the thinning thickness is conducive to improving the energy density of the battery. Solid-state lithium batteries present new interface interactions and chemical mechanical behaviors. The strength, chemical and electrochemical properties of traditional copper foil cannot meet the needs of solid-state batteries. Solid-state battery copper foil requires high strength to prevent fracture, high interface compatibility to prevent active material detachment, and good elastic-plastic stress release. Solid-state batteries require special copper foil adaptation: composite current collectors are the current research and development direction. Due to technological development factors, it will take some time for high-energy-density solid-state batteries to achieve industrialization. The first type of battery that can be mass-produced on a large scale is between liquid lithium-ion and solid-state lithium batteries. At present, Semisolid batteries and solid-state batteries are advancing in parallel. The cost and technical difficulty of Semisolid batteries are lower than those of solid-state batteries. They have been installed on vehicles and the industrialization process is slightly faster than that of solid-state batteries. The solid-state batteries in this study include Semisolid batteries and Solid-state batteries.

The global Copper Foil for Solid-state Batteries market size was estimated at USD 685.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 23.50% during the forecast period.
