Abstracts

Copper moulds for continuous casting are specialized components used in the steel and non-ferrous metal industries to solidify molten metal into semi-finished shapes such as billets, blooms, or slabs. These moulds are made from high-conductivity copper or copper alloys, often coated with materials like chromium or nickel to enhance durability and reduce friction. In the continuous casting process, molten metal is poured into the copper mould, which rapidly extracts heat to form a solidified shell while the interior remains molten. The solidified metal is then continuously withdrawn for further processing. Copper moulds are critical for achieving high-quality cast products, efficient heat transfer, and long service life in high-temperature casting environments. Copper mould tubes play a crucial role in the continuous casting of steel, particularly in industries like the Continuous Casting Machine (CCM) market, where they are used to shape molten metal into solid billets, slabs, or blooms. The demand for copper mould tubes in the CCM market is likely to continue growing due to their key attributes, such as excellent thermal conductivity, durability, and resistance to wear and corrosion. These properties help maintain high-quality casting, reduce maintenance downtime, and increase operational efficiency. As the steel industry continues to innovate with advancements in casting technologies, the need for more advanced, wear-resistant, and cost-effective copper mould tubes will rise. Moreover, with the ongoing global push for improved steel production processes, there could be increased investment in enhancing the performance and lifespan of CMTs, making them even more integral to the market. Overall, copper mould tubes will remain a vital component in optimizing the continuous casting process, contributing to both the quality and productivity of steel manufacturing.

The global Copper Moulds for Continuous Casting market size was estimated at USD 839.0 million in 2025 and is projected to grow at a compound annual growth rate
