Abstracts

Copper network switches are networking devices that operate primarily at the data link layer (Layer 2) and network layer (Layer 3) of the OSI model, utilizing twisted-pair copper Ethernet cables (such as Cat5e, Cat6, or Cat6a) to connect devices within a local area network (LAN) and manage data traffic through packet switching. These switches are distinguished by their use of copper cabling, which offers cost-effectiveness, ease of installation, and compatibility with existing infrastructure, making them suitable for enterprise, industrial, and small to medium-sized business environments where high bandwidth over short to medium distances is required. Key features often include Power over Ethernet (PoE) capabilities, varying port densities, managed or unmanaged functionalities, and support for speeds ranging from Fast Ethernet (100 Mbps) to multi-gigabit Ethernet (up to 10 Gbps), catering to diverse networking needs from basic connectivity to advanced traffic management and security.
