## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Copper Product for Semiconductor competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. The copper materials used in semiconductors primarily include copper alloy strips, bonding copper wires, high-purity copper, and copper-based thermal management materials. Among these, copper alloy strips (e.g., C19400, C70250) are widely utilized in lead frames and packaging materials due to their high electrical conductivity, corrosion resistance, and processability, providing robust support for chip electrical connectivity and mechanical stability. As a critical material in chip packaging, bonding copper wires replace traditional gold wires, enhancing packaging efficiency through cost-effectiveness and superior conductivity. High-purity copper is employed in copper sputtering targets and backplates. Copper-based thermal management materials, such as heat sinks and Heat Spreader, optimize heat dissipation in semiconductor devices via their efficient thermal conductivity, ensuring stable equipment operation. According to Semiconductor Industry Association (SIA), global semiconductor chip sales hit \$627.6 billion in 2024, an increase of 19.1% compared to the 2023 total of \$526.8 billion. The global semiconductor market experienced its highest-ever sales year in 2024, topping \$600 billion in annual sales for the first time, and double-digit market growth is projected for 2025. Semiconductors enable virtually all modern technologies ? including medical devices, communications, defense applications, AI, advanced transportation, and countless others ? and the long-term industry outlook is incredibly strong. Regionally, yearly sales were up in the Americas (44.8%), China (18.3%), and Asia Pacific/All Others (12.5%), but down in Japan (-0.4%), and Europe (-8.1%). Several semiconductor product segments stood out in 2024. Sales of logic products totaled \$212.6 billion in 2024, making it the largest product

category by sales. Memory products were second in terms of sales, increasing by 78.9% in 2024 to a total of \$165.1 billion. DRAM products, a subset of memory, recorded an 82.6% sales increase, the largest percentage growth of any product category in 2024.

The global Copper Product for Semiconductor market size was estimated at USD 3892.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.50% during the forecast period.
