The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Copper Rolling Oil competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Copper Rolling Oil reached approximately 80,000 tons, with an average selling price of approximately US\$4,000 per ton. Copper Rolling Oil refers to a lubricant used as a lubricant and cooling medium during the cold or hot rolling process of copper. It typically consists of a base oil, additives (such as anti-wear agents and rust inhibitors), and auxiliary agents (such as emulsifiers). Its purpose is to reduce friction between the rolls and the copper material, control the rolling temperature, prevent material deformation and roll surface oxidation, and ultimately increase rolling speed, reduce energy consumption, and improve the surface quality of the copper material. The core of the upstream supply chain of Copper Rolling Oil is the base oil and additive manufacturers, such as the high-quality hydrogenated mineral base oil provided by China National Petroleum Corporation and the special extreme pressure lubricants, antioxidants and surfactants supplied by BASF; the downstream is mainly used in copper plate and foil rolling production lines, and the products are directly supplied to large copper processing companies such as Ningbo Xingye Shengtai and China Copper Central China Copper Industry. The copper materials finally produced are used in electronic information, new energy vehicles and power equipment and other fields.

The global Copper Rolling Oil market size was estimated at USD 320.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
