Report Overview:

Copper–tungsten (tungsten–copper, CuW, or WCu) is a mixture of copper and tungsten. As copper and tungsten are not mutually soluble, the material is composed of distinct particles of one metal dispersed in a matrix of the other one. The microstructure is therefore rather a metal matrix composite instead of a true alloy. The material combines the properties of both metals, resulting in a material that is heat-resistant, ablation-resistant, highly thermally and electrically conductive, and easy to machine.

The Global Copper Tungsten Market Size was estimated at USD 160.20 million in 2023 and is projected to reach USD 212.24 million by 2029, exhibiting a CAGR of 4.80% during the forecast period.
