Abstracts

Copper weld thru primer is a specialized anti-corrosion coating formulated with a high concentration of copper particles suspended in a fast-drying resin base, designed to be applied to bare metal surfaces prior to welding operations; it serves the dual function of preventing oxidation during the welding process by creating a conductive path that allows proper current flow for arc welding while simultaneously providing long-term corrosion resistance, as the copper content inhibits rust formation even after the heat of welding burns away the organic components of the primer.

The global Copper Weld Thru Primer market size was estimated at USD 120.45 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.15% during the forecast period.
