Abstracts

Cordless disc grinders are usually powered by rechargeable batteries, breaking away from the constraints of traditional wired tools and enabling users to operate freely in places without power outlets. The core components of a cordless circular grinder include a high-efficiency motor, abrasive discs and a protective cover, suitable for a variety of tasks such as cutting, grinding, polishing and material removal. The battery technology of a cordless circular grinder usually uses lithium-ion batteries, which are characterized by light weight, large capacity and long life, which makes the tool last longer and charge faster. In order to further improve work efficiency, cordless circular grinders are also equipped with a variety of abrasive discs of different materials and shapes, which can be replaced according to specific work needs, such as metal cutting discs, stone cutting discs, grinding wheels, etc.
