Report Overview

A cordless iron is a type of household appliance used for removing wrinkles and creases from fabric. Unlike traditional irons, which are connected to a power source via a cord, cordless irons operate using rechargeable batteries. This eliminates the need for a power cord, providing greater freedom of movement and making it easier to maneuver the iron over garments.

Cordless irons typically consist of a base unit that houses the battery and heating element, and a detachable ironing plate or soleplate. The base unit is responsible for heating the iron and charging the battery when not in use. Once the iron reaches the desired temperature, it can be detached from the base and used freely without any cords restricting movement.
