## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Core Binders competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Core Binders production reached approximately 468 kilotons with an average global market price of around US\$1,200 per ton. Single-line annual production capacity averages 31 kilotons with a gross margin of approximately 25-28%. The upstream sector for Core Binders primarily consists of raw materials such as phenolic resins and silicates, which are concentrated in the chemical industry. In the downstream applications, steel foundries account for approximately 40% of the consumption, metal foundries for about 50%, and other sectors for roughly 10%. The market demand for Core Binders is stable, with opportunities driven by the increasing demand for precision castings in the high-end foundry industry and the rising demand for environmentally friendly binders. Core Binders are integral in the casting process, serving as the cohesive agents that bond the sand particles to form a robust and precise mold around the core, ensuring dimensional accuracy and structural integrity of the casting. Their unique ability to maintain the shape and stability of the core during the casting process is critical for producing high-quality, complex-shaped components with minimal distortion.

The global Core Binders market size was estimated at USD 562.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.00% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Core Binders market, covering all critical facets from a broad macroeconomic overview to detailed
