Abstracts

A Core Liquid Filter is a component used in filtration systems to remove impurities, particles, or contaminants from liquid substances. It is a cylindrical device usually made of durable materials such as polypropylene, polyester, or activated carbon, and it contains a specific filtration medium. The liquid to be filtered passes through the cartridge, while the filtration medium inside traps or absorbs the unwanted particles. Depending on the specific application and desired level of filtration, different types and sizes of Core Liquid Filters are available, such as pleated filter cartridges, melt-blown filter cartridges, string wound filter cartridges, membrane filter cartridges, and others. Core Liquid Filters are commonly used in industries such as water treatment, pharmaceuticals, food and beverage processing, chemicals, and many others where the purity or clarity of liquids is essential. Regular replacement or cleaning of Core Liquid Filters is necessary to maintain their efficiency and ensure optimal filtration performance. The core global core liquid filter manufacturers include Veolia, Eaton, Parker Hannifin, Pall, 3M and Pentair, etc. The top three manufacturers account for approximately 23% of the global share. The Asia-Pacific region is the world's largest market, accounting for nearly 47% of the market share. In terms of product types, pleated filter elements occupy a dominant position, accounting for 51% of the market share.
