Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Core-Shell Toughening Agents competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Global sales of core-shell toughening agents in 2024 reached 70,175 tons, with an average selling price of US\$8,425 per ton. Core-shell toughening agents are additives added to polymer matrix materials, comprising a soft "core" and a hard "shell" structure. This structure effectively improves the toughness of the material by allowing the soft core to absorb energy and prevent cracking when the material is subjected to impact, while the hard shell provides compatibility with the matrix resin, without significantly reducing other properties such as heat distortion temperature (Tg) and modulus. The raw materials for core-shell toughening agents mainly include monomers such as n-butyl acrylate, styrene, acrylonitrile, and octamethylcyclotetrasiloxane, accounting for approximately 85% of the total raw material cost. The core layer often uses butadiene and acrylate rubber monomers, while the shell layer uses hard monomers such as methyl methacrylate and styrene-acrylonitrile. Organosilicon toughening agents also require the addition of hydrogen-containing silicone oil. In terms of cost structure, direct material costs account for a very high proportion, typically exceeding 80% of total production costs. Raw material prices are significantly affected by fluctuations in the petrochemical industry chain. For example, in 2021, the unit price of n-butyl acrylate increased by 91.53% year-on-year, directly leading to a 19.2% increase in unit material costs, a key factor affecting profitability.

The global Core-Shell Toughening Agents market size was estimated at USD 591.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of

7.60% during the forecast period.
