Abstracts

The Coreless U-shape linear motor is a specialized type of linear electric motor that features a coreless design with a U-shaped magnetic circuit to generate linear driving force. Unlike traditional core-based linear motors, the coreless U-shape motor eliminates the iron core, reducing hysteresis and eddy current losses, resulting in higher efficiency and faster response times. The U-shape structure provides a more uniform magnetic field distribution, improving motion accuracy and control performance. This type of motor is widely used in precision positioning systems, automated production lines, robotic control, and other applications, particularly in scenarios that require high precision, low friction, and rapid response speeds.

The global Coreless U-shape Linear Motor market size was estimated at USD 302.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.20% during the forecast period.
