Abstracts

Coriolis Flow Meter Calibration is the process of verifying and adjusting the accuracy of a Coriolis flow meter to ensure precise mass flow and density measurements. It involves comparing the meter's readings against a known reference standard, using methods such as gravimetric or volumetric calibration. This can be done at the factory or in the field, with key steps including zero calibration, flow verification, and density checks to account for temperature variations. Calibration ensures compliance with industry standards like ISO, NIST, or API and is crucial for maintaining accuracy in applications such as oil & gas, chemical processing, and pharmaceuticals.

The global Coriolis Flow Meter Calibration market size was estimated at USD 74.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.70% during the forecast period.
