Report Overview

Corn gluten pellets are a byproduct of corn wet milling, primarily used as a high-protein animal feed ingredient, particularly in poultry, swine, and aquaculture diets. They consist of the protein-rich fraction left after starch extraction, offering a cost-effective alternative to soybean meal and other traditional protein sources. The pellets are valued for their digestibility, amino acid profile, and low fiber content, making them suitable for livestock and pet food formulations. Additionally, corn gluten pellets are gaining attention in organic farming as a natural herbicide due to their pre-emergent weed suppression properties. The market is influenced by corn production volumes, processing efficiency, and demand from the animal feed industry, with sustainability trends and regulatory standards shaping product adoption and pricing dynamics.

The global Corn Gluten Pellets market size was estimated at USD 1982.43 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
