Abstracts

Corn Oil Extraction Aid is a patented, non-polymeric liquid product. It is mainly used to increase the release of corn oil during the mechanical refining process, thereby significantly increasing the yield of corn oil. In addition, this additive can also reduce solids in the oil, making the resulting corn oil cleaner and of higher quality. Because it reduces system deposits, it also reduces downtime for system cleaning and maintenance. Its mechanism of action is mainly to improve the detachment effect of corn oil during centrifugation. The corn oil extraction auxiliaries market is closely related to the overall development of the corn oil industry. From the perspective of the corn oil market, it has huge potential for new demand, which allows more capital to enter the market to participate in competition. The main methods used by domestic enterprises to refine corn oil include pressing, water enzymatic method and supercritical CO₂ extraction method, among which the pressing method has the widest application range.
