Abstracts

Corn sprayed gluten feed is a common animal feed, which is processed from by-products of corn deep processing. When corn is used to produce starch or other products, by-products such as corn husks are produced. Corn sprayed gluten feed is a feed product obtained by spraying corn soaking liquid (which is rich in protein, amino acids, a small amount of starch and other nutrients) onto corn husks and other substances, and then through drying and other processes. After spraying treatment, its nutritional content has been significantly improved and optimized.
