Abstracts

Coronavirus Spike Protein (S Protein) is an important structural protein on the surface of coronaviruses that is responsible for virus binding to and invasion of host cells. The protein initiates the membrane fusion process by binding to the ACE2 receptor on the surface of the host cell, allowing the virus to enter the cell and begin replication. Due to the critical role of the echinocandin protein in the process of viral infection, it has become an important target for vaccines and antibody therapy.

The global Coronavirus Spike Protein market size was estimated at USD 1452.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.60% during the forecast period.
