Abstracts

The metallic sheath plays a key role in the design of High Voltage underground cable systems, as it must satisfy essential electrical and mechanical functions to ensure the correct operation of a cable. Cables with lead alloy sheath - the first solution adopted in the development of metallic shielding technologies - provide all necessary guarantees in terms of technical characteristics: mechanical protection, fluid and moisture tightness, and short circuit current carrying capability. However, the main disadvantages of cables with a lead alloy sheath are weight - especially from the installation perspective ? and, in specific instances, fatigue strain.

The global Corrugated Aluminium Sheath Cas Cables market size was estimated at USD 3404.51 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.50% during the forecast period.
