## Abstracts

Bituminous roof sheets are designed to protect residential and commercial buildings. As the name infers, these are layering that arrives at the site in the form of rolls. These are then spread out and laid on a firm surface. The most widely recognized sort of sheet-based layer is a bituminous waterproofing film. This type of membrane adheres to the substrate with a hot tar-based cement using blowtorches. Joints between adjacent membranes are also made with the same hot adhesive. Joints between contiguous layers are additionally made with the same air gun. The sheets are covered by around 100mm to frame a waterproof joint. A few films are even joined by dissolving them with a hot compressed air firearm and after that covering them on the beforehand laid sheet.
