Abstracts

Cosmeceutical ingredients are biologically active compounds that bridge the gap between cosmetics and pharmaceuticals, delivering therapeutic benefits beyond superficial aesthetics by influencing skin structure and function at a cellular or biochemical level; these ingredients?such as retinoids, peptides, antioxidants, alpha-hydroxy acids, and growth factors?are scientifically validated for their efficacy in addressing specific dermatological concerns like photoaging, hyperpigmentation, inflammation, and barrier repair, and are typically formulated at concentrations high enough to produce measurable physiological changes while adhering to regulatory frameworks that classify them as cosmetics rather than drugs, despite their functional overlap.

The global Cosmeceutical Ingredients market size was estimated at USD 2450.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 7.85% during the forecast period.
