Abstracts

Cosmetic metallic pigments are specialized colorants used to create shimmering, reflective, and metallic visual effects in cosmetic and personal care formulations, primarily consisting of finely milled, surface-treated mica, titanium dioxide, iron oxides, or synthetic substrates coated with metal oxides such as aluminum, bronze, or silica. These pigments are engineered to be non-toxic, skin-safe, and compliant with global regulatory standards, offering properties like high luster, smooth application, and stability in diverse product bases including lipsticks, eyeshadows, nail polishes, foundations, and body glitter. Their functionality extends beyond mere coloration to providing light-diffusing, texture-enhancing, and opacifying characteristics, often categorized by particle size, shape, and interference properties to achieve specific optical effects like pearl, satin, or chrome finishes.
