Abstracts

Pullulan is a water-soluble polysaccharide polymer produced through the fermentation of starch by the fungus *Aureobasidium pullulans**, and in its cosmetics-grade form, it is highly purified to meet stringent safety and quality standards for topical applications. It functions primarily as a film-forming agent, binder, and thickening agent in cosmetic formulations, valued for its ability to create flexible, non-sticky, and oxygen-impermeable films that enhance product texture, improve adhesion, and provide a smooth finish. In skincare, haircare, and makeup products?such as facial masks, serums, foundations, and styling gels?it contributes to moisture retention, extended wear, and a silky sensory experience, while its natural origin and biocompatibility align with growing consumer demand for clean and sustainable ingredients.
