## Abstracts

Cough lozenges are a type of medication specifically designed to relieve cough symptoms. They are usually taken in lozenge form and absorbed through the oral mucosa, directly acting on the respiratory tract to relieve cough, phlegm, or asthma. According to the ingredients and mechanism of action, cough lozenges can be divided into traditional Chinese medicine cough lozenges, chemical cough lozenges, biological cough lozenges, and compound cough lozenges. The global cough lozenges market has maintained stable growth, driven mainly by technological innovation, product upgrades, and increased health awareness. With the application of biotechnology and nanotechnology, the research and development of cough lozenges tends towards high efficiency and precision. For example, the use of a new delivery system in lozenges improves efficacy while reducing side effects. The increasing attention of consumers to health has driven the development of the cough lozenges market towards a natural, safe, and efficient direction. Traditional Chinese patent medicines cough lozenges are favored by more and more consumers because of natural ingredients and traditional efficacy. The main consumer groups for cough lozenges include children, adults, and the elderly. Children and the elderly have a higher demand for cough lozenges due to their weaker immune system. The market competition is fierce, and the main participating companies include international enterprises such as Herbalife, Cigna, Pfizer, as well as domestic enterprises such as Hebei Bianque Pharmaceutical and Jiuzhitang. These enterprises compete for market share through product innovation, brand building, and channel expansion. Traditional Chinese patent medicines brands occupy a large market by virtue of traditional advantages, while chemical and biological agent brands gradually expand their influence through technological innovation and efficient marketing strategies. In the future, the cough lozenges industry will continue to develop towards high-end, personalized, and international directions. Enterprises need to pay attention to changes in consumer demand, develop segmented products for

different populations and diseases, and strengthen international cooperation to enhance global market competitiveness.

The global Cough Lozenges market size was estimated at USD 1800.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.10% during the forecast period.
