## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Coulometric Moisture Titrators competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Acid Digestion Evaporator production reached approximately 69.4 k units, with an average global market price of around US\$ 1640 per unit. A Coulometric Moisture Titrator is a precision analytical instrument based on the Karl Fischer coulometric principle, specifically designed to measure trace moisture content in samples. The instrument generates iodine through electrolysis of iodide ions, which undergoes quantitative chemical reaction with moisture in the sample, accurately calculating water content according to Faraday's law of electrolysis. The system integrates precision electrolytic electrodes, dual platinum needle detection systems, and microprocessor control units, featuring low detection limits, high accuracy, and high automation levels. Capable of detecting moisture content as low as 0.0001%, it is widely used in quality control processes in petrochemical, pharmaceutical, food, and electronics industries. The gross profit margin of the Coulometric Moisture Titrators industry is about 50% -65%, and professional manufacturers produce about 800-1200 units per production line annually. The cost of raw materials (electrolytic electrodes, detectors, precision pump valves, control systems) accounts for about 35% -40%, R&D and software investment (electrolytic control algorithms, endpoint judgment models) accounts for 25% -30%, precision machining and calibration account for 15% -20%, and industry certification and technical support account for 15-20%. The cost difference is mainly reflected in the detection sensitivity, automation level, and certification scope that meets industry standards. Every year, various industries worldwide consume approximately 12-18 million sets of related consumables, including electrolytic electrodes, seals, reagents, and reference materials. Among them, the consumption in

the petrochemical and pharmaceutical industries accounts for over 60%, and the demand in the new energy industry is growing rapidly. Downstream consumption is mainly driven by the continuous improvement of product quality standards, strict production process control, and increased testing frequency.

The global Coulometric Moisture Titrators market size was estimated at USD 206.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.30% during the forecast period.
