Report Overview

Gasifiers are essentially chemical reactors which are used for the production of heat, rather than fuel for internal combustion engines. An essential advantage of a gasifier is its ability to produce higher temperatures as compared with other conventional methods. Applications of gasifiers are found in forestry and agro-based industries as well as in power supply to remote communities. In updraft gasifiers (also known as counter-current), air enters from below the grate and flows upwards, whereas the fuel flows downwards. An updraft gasifier has distinctly defined zones for partial combustion, reduction, pyrolysis, and drying.

The global Counter Current Gasifier market size was estimated at USD 579 million in 2023 and is projected to reach USD 994.95 million by 2032, exhibiting a CAGR of 6.20% during the forecast period.
