Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Counter-Rotating Double Movement Agitator competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. The counter-rotating double movement agitator is a high-performance composite mixing equipment, mainly composed of two coaxial but counter-rotating mixing systems, usually including an inner shaft (with paddles or frame blades) and an outer shaft (usually anchor or ribbon), which rotate in different directions and speeds. This design can simultaneously achieve shear, extrusion and axial convection motion during the mixing process, significantly improving the mixing efficiency and uniformity of materials. It is particularly suitable for medium and high viscosity, non-Newtonian fluids, heat-sensitive or reactive mixtures, such as cosmetic pastes, high-end adhesives, lithium battery slurries, food concentrates, etc. Some equipment is also equipped with a scraping mechanism and a vacuum/heating system to ensure that the material is turned over in the entire area, the temperature control is stable, and there is no dead corner residue. It is a key equipment for achieving high consistency and high cleanliness mixing.

The global Counter-Rotating Double Movement Agitator market size was estimated at USD 335.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.80% during the forecast period.
