### Report Overview:

Twin screw extruder is the classic machine used for the plastic extrusion process when two or more ingredients are mixed or compounded. In a Co-rotating Twin-screw Extruder system, the screw transports material around up to the point where the screws intermesh. Because of the two opposing and equal velocity gradients acting at this point, material is taken over by the other screw with the least amount of material passing through the gap between the two screws. This system offers a higher degree of self-cleaning with greater control over residence time distribution.

The Global Counter Rotating Twin-screw Extruder Market Size was estimated at USD 788.63 million in 2023 and is projected to reach USD 969.43 million by 2029, exhibiting a CAGR of 3.50% during the forecast period.
