Abstracts

Counterfeit detector pens are specialized writing instruments that contain a chemical solution, typically iodine-based, designed to react with the starch present in most types of wood-based paper used for legitimate currency, resulting in a color change that helps distinguish real bills from counterfeits printed on non-currency-grade paper. These pens are widely used in cash-intensive businesses such as retail, hospitality, and banking, where quick and accessible verification of bills is necessary to prevent financial losses due to counterfeit currency circulation. While their effectiveness is limited against sophisticated counterfeits printed on starch-free or chemically treated paper, they remain a popular, low-cost tool for initial screening due to their ease of use and immediate visual feedback.

The global Counterfeit Detector Pens market size was estimated at USD 520.75 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
