Abstracts

The coupled measuring tube is a device used to measure fluid flow or related parameters. Its core feature is to convert the dynamic characteristics of the fluid (such as velocity, pressure, density, etc.) into measurable physical quantities (such as electrical signals, mechanical displacement, etc.) through a coupling mechanism. This device usually combines multiple physical principles (such as electromagnetic induction, piezoelectric effect, heat conduction, etc.) to achieve measurement through non-contact or indirect contact methods. It is suitable for special working conditions such as high temperature, high pressure, corrosion or high viscosity.

The global Coupled Measuring Tube market size was estimated at USD 970.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.20% during the forecast period.
