Abstracts

A covert weapon detection system is a security technology designed to discreetly identify concealed weapons or dangerous objects on individuals in various settings, including high-security environments like airports, government buildings, public venues, and critical infrastructure facilities. Unlike traditional metal detectors or visible security measures, covert weapon detection systems aim to detect threats surreptitiously, without the knowledge or cooperation of the individuals being screened. These systems play a crucial role in enhancing security and reducing the risk of concealed weapons being brought into sensitive areas. The refinement and integration of advanced imaging technologies, such as terahertz and millimeter-wave imaging, continue to enhance the ability to detect concealed weapons with higher accuracy and resolution.

The global Covert Weapon Detection System market size was estimated at USD 786.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 12.40% during the forecast period.
