Report Overview

The market for COVID-19 drugs encompasses pharmaceutical products developed specifically to treat SARS-CoV-2 infections, including antiviral medications, monoclonal antibodies, immunomodulators, and repurposed drugs originally designed for other conditions. These drugs target different stages of the viral lifecycle or the body's immune response, aiming to reduce viral replication, alleviate symptoms, or prevent severe disease progression. Key products include antivirals like Paxlovid (nirmatrelvir/ritonavir) and molnupiravir, which inhibit viral replication, as well as monoclonal antibodies such as bamlanivimab/etesevimab, though their efficacy varies with emerging variants. The market is driven by pandemic-related demand, government funding, and accelerated regulatory approvals, but faces challenges such as viral mutations, supply chain disruptions, and competition from vaccines. Post-pandemic, growth may stabilize as focus shifts to long-term treatment strategies and combination therapies for high-risk populations.

The global Covid 19 Drugs market size was estimated at USD 3203.52 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.75% during the forecast period.
