The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on CPTC Thermistor competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global CPTC Ceramic Positive Temperature Coefficient Thermistor production reached approximately 36600 Million units, with an average global market price of around US\$ 20.55 per k unit. CPTC Ceramic Positive Temperature Coefficient Thermistor (ceramic positive temperature coefficient thermistor) is a kind of thermistor designed with semiconductor ceramic materials. The main material is barium carbonate, and a small amount of rare earth, recipient elements and additives such as glass are added. Semiconductor resistors with temperature sensitivity are formed through high-temperature sintering. It has a small resistance below the Curie temperature. When the temperature exceeds the Curie temperature, the resistance value increases step by step with the rise in temperature. It is used for overheat sensing in circuits and plays a role in overheat and overcurrent protection. The market size continues to expand. With the rapid development of industries such as electronics, communications, automobiles, and home appliances, the demand for ceramic PTC thermistors is constantly increasing. Especially in emerging fields such as new energy vehicles, 5G communications, and the Internet of Things, the application prospects of ceramic PTC thermistors are broad. It is predicted that the global PTC thermistor market sales will continue to grow. As one of the world's largest consumer markets, China's market size will also keep expanding. Technological innovation promotes industrial upgrading. Material innovation: With the continuous research and application of new materials, the performance of ceramic PTC thermistors will be further enhanced. For instance, by improving the formula and process of ceramic materials, the temperature resistance range, accuracy and stability of PTC thermistors can be enhanced. Structural design innovation: By
