Crane Remote Control Station is a device or system that allows operators to control a crane from a distance, rather than from within the crane's cabin. This station typically consists of a handheld or fixed control unit that uses wireless or wired technology to communicate with the crane's control system. It enables the operator to manage various crane functions, such as lifting, lowering, and moving loads, from a safe location, often equipped with real-time visual feedback through cameras or sensors. The main advantages of a crane remote control station are enhanced safety, as it minimizes the operator's exposure to hazardous environments, and improved flexibility, allowing the control of multiple cranes or operations simultaneously.

The global Crane Remote Control Station market size was estimated at USD 108.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.40% during the forecast period.
