Abstracts

Cranial fixation systems are specialized medical devices used in neurosurgical procedures to stabilize and secure bone flaps or cranial implants after craniotomy or craniectomy, typically involving plates, screws, meshes, and clamps made from biocompatible materials such as titanium, resorbable polymers, or advanced composites. These systems are designed to provide rigid fixation, promote osseointegration, and restore cranial integrity while minimizing complications such as infection, implant migration, or stress shielding. They are employed in a range of applications, including trauma surgery, tumor resection, reconstructive cranioplasty, and the treatment of cranial deformities, with key product variations including traditional non-resorbable systems, bioresorbable (absorbable) fixation devices, and patient-specific implants fabricated using 3D printing technology.

The global Cranial Fixation Systems market size was estimated at USD 1032.4 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.25% during the forecast period.
