Abstracts

A cranial helmet is a corrective helmet used to treat deformity lamellar head deformity or flat head syndrome. It primarily serves as a mold for the baby's head, limiting further asymmetrical growth and guiding the flattened areas to grow into the helmet's voids in a normal, rounded manner. With the development of 3D printing technology and digital scanning technology, the degree of customization and precision of skull helmets may be further improved. This will allow the helmet to better conform to each baby's head shape and needs, improving treatment effectiveness.
