## Abstracts

Credit Rating Software is a professional information system that provides standardized, data-driven credit risk assessment for financial institutions, corporate credit reporting agencies, regulatory authorities, and other entities. Based on credit rating theory, it integrates multi-dimensional data sources (financial data, transaction data, public opinion data, compliance records, industry data, etc.) and, through built-in quantitative algorithms, rule engines, and machine learning models, automates the collection, cleaning, analysis, rating calculation, and report generation of credit information for credit subjects (enterprises, individuals, local governments, financial institutions, etc.). Ultimately, it outputs objective and quantifiable credit ratings and risk assessment results, providing core data support for scenarios such as credit approval, investment decisions, risk management, and compliance supervision. Credit rating software is evolving from rule-driven to intelligent decision-making. Leading companies have introduced graph neural networks to capture the risk transmission paths of related parties and are integrating generative AI into their products, launching intelligent risk control assistants that can automatically interpret financial statements and generate risk summaries. Meanwhile, the penetration rate of AI-native architecture products is rapidly increasing, reaching 37% in corporate banking in 2024 and projected to exceed 60% by 2026. The target audience is no longer limited to traditional financial institutions such as banks and insurance companies, and is rapidly penetrating into diversified scenarios. In supply chain finance, it can assess the credit of upstream and downstream SMEs, solving their financing difficulties; in green finance, it can build dedicated rating dimensions for green loan projects and environmental protection companies, adapting to the needs of green finance development; in cross-border trade and e-commerce, it focuses on credit assessment of cross-border transaction entities, preventing credit risks in cross-border transactions. Furthermore, in inclusive finance, it can mine the credit value of micro and small enterprises and individual businesses through multi-

dimensional data, providing a basis for them to obtain credit support, further expanding the software's market space.

The global Credit Rating Software market size was estimated at USD 1269.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.20% during the forecast period.
